

200204036 07000035

Practitioner's Docket No. MPI2000-521P1RM

**PATENT**

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE**

In re application of: Bandaru, Rajasekhar  
Application No.: 10/024,036  
Filed: December 17, 2001  
For: 68730 and 69112, Protein Kinase Molecules and Uses Therefor

Group No.: *Not yet assigned*  
Examiner: *Not yet assigned*

Commissioner for Patents  
Washington, D.C. 20231

**PRELIMINARY AMENDMENT**

COPY OF PAPERS  
ORIGINALLY FILED

Dear Sir:

Prior to examination, Applicant hereby requests entry of the amendments to the specification provided herewith. As required under 37 CFR §1.121(b)(1)(ii), a clean version of each replacement paragraph is shown in Appendix A. As required under 37 CFR §1.121(b)(1)(iii), a marked version of each replacement paragraph is shown in Appendix B, in which deleted matter is bracketed and inserted matter is underlined.

**CERTIFICATION UNDER 37 C.F.R. SECTIONS 1.8(a) and 1.10\***

I hereby certify that, on the date shown below, this correspondence is being:

**MAILING**

- ☒ deposited with the United States Postal Service in an envelope addressed to the Commissioner for Patents, Washington, D.C. 20231.

**37 C.F.R. SECTION 1.8(a)**

- ☒ with sufficient postage as first class mail.

**37 C.F.R. SECTION 1.10\***

- ☐ as "Express Mail Post Office to Addressee"  
Mailing Label No. \_\_\_\_\_

**TRANSMISSION**

- ☐ transmitted by facsimile to the Patent and Trademark Office.

Signature

*Diana Gentile*

Date: June 26, 2002

Diana Gentile

(type or print name of person certifying)

**\*WARNING:** Each paper or fee filed by "Express Mail" **must** have the number of the "Express Mail" mailing label placed thereon prior to mailing. 37 C.F.R. section 1.10(b). "Since the filing of correspondence under section 1.10 without the Express Mail mailing label thereon is an oversight that can be avoided by the exercise of reasonable care, requests for waiver of this requirement will **not** be granted on petition." Notice of Oct. 24, 1996, 60 Fed. Reg. 56,439, at 56,442.

In re-application of: Bandaru, Rajasekhar  
Application No.: 10/024,036

10/024,036 is a continuation  
Attorney Docket No. MPI00-521PIRM

### REMARKS

Applicant maintains that the amendments introduce no new matter to the instant application. The amendments are requested to provide correct reference to Figures 3A-3C and 4A-4C.

Entry of the remarks made herein is respectfully requested.

June 26, 2002

Respectfully submitted,  
MILLENNIUM PHARMACEUTICALS, INC.

**APPENDIX A**  
**CLEAN VERSION OF REPLACEMENT PARAGRAPHS**

On page 6, please replace paragraphs [0026] and [0027] with the following:

**[0026]** *Figures 3A, 3B and 3C* depict alignments of regions of the 68730 protein to the top-scoring domains identified by searching for complete domains in PFAM (version 5.5) and SMART (version 3.1) against the HMM database (HMMER 2.1.1) Fig. 3A depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a protein kinase domain (PFAM Accession No. PF00069). A single domain was found, with a bit score of 346.3 and an E-value of 3.4e-100. Fig. 3B depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a serine/threonine kinase domain (SMART Accession No. S\_TKc). The bit score is 386.6 and the E-value is 2.5e-112. Fig. 3C depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a tyrosine kinase domain (SMART Accession No. TyrKc). The bit score is 35.7 and the E-value is 4e-14. All three alignments show four underlined sequences. The first underlined sequence (at amino acid residues 29 to 57) is a pattern match to a protein kinase ATP binding region signature sequence (Prosite Accession No. PS00107). The second and third underlined sequences (at amino acid residues 109 to 116 and at amino acids 126 to 134) are pattern matches to Prosite Accession No. PS00007, a tyrosine kinase phosphorylation site. The fourth underlined sequence (at amino acid residues 140 to 152) is a pattern match to a serine/threonine protein kinase active site signature sequence (Prosite Accession No. PS00108).

**[0027]** *Figures 4A, 4B and 4C* depict alignments of the 69112 protein to the top-scoring domains identified by searching for complete domains in PFAM (version 5.5) and SMART (version 3.1) against the HMM database (HMMER 2.1.1) Fig. 4A depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a protein kinase domain (PFAM Accession No. PF00069). A single domain was found, with a bit score of 350.2 and an E-value of 2.3e-101. Fig. 4B depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a serine/threonine kinase domain (SMART Accession No. S\_TKc). The bit score is 372.7 and the E-value is 3.8e-108. Fig. 4C depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a tyrosine kinase domain (SMART Accession No. TyrKc). The bit score is 50.0 and the E-value is 5.3e-15. All three alignments show an underlined sequence at 473 to 485, which is a pattern match to a serine/threonine protein kinase active site signature sequence (Prosite Accession No. PS00108).

**APPENDIX B**  
**MARKED-UP VERSION OF REPLACEMENT PARAGRAPHS**

On page 6, paragraphs [0026] and [0027] have been amended as follows:

**[0026]** *Figures 3A, 3B and 3C* depict alignments of regions of the 68730 protein to the top-scoring domains identified by searching for complete domains in PFAM (version 5.5) and SMART (version 3.1) against the HMM database (HMMER 2.1.1) Fig. [5A] 3A depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a protein kinase domain (PFAM Accession No. PF00069). A single domain was found, with a bit score of 346.3 and an E-value of 3.4e-100. Fig. [5B] 3B depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a serine/threonine kinase domain (SMART Accession No. S\_TKc). The bit score is 386.6 and the E-value is 2.5e-112. Fig. [5C] 3C depicts an alignment of amino acid residues 23 to 279 of SEQ ID NO:2 with a tyrosine kinase domain (SMART Accession No. TyrKc). The bit score is 35.7 and the E-value is 4e-14. All three alignments show four underlined sequences. The first underlined sequence (at amino acid residues 29 to 57) is a pattern match to a protein kinase ATP binding region signature sequence (Prosite Accession No. PS00107). The second and third underlined sequences (at amino acid residues 109 to 116 and at amino acids 126 to 134) are pattern matches to Prosite Accession No. PS00007, a tyrosine kinase phosphorylation site. The fourth underlined sequence (at amino acid residues 140 to 152) is a pattern match to a serine/threonine protein kinase active site signature sequence (Prosite Accession No. PS00108).

**[0027]** *Figures 4A, 4B and 4C* depict alignments of the 69112 protein to the top-scoring domains identified by searching for complete domains in PFAM (version 5.5) and SMART (version 3.1) against the HMM database (HMMER 2.1.1) Fig. [6A] 4A depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a protein kinase domain (PFAM Accession No. PF00069). A single domain was found, with a bit score of 350.2 and an E-value of 2.3e-101. Fig. [6B] 4B depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a serine/threonine kinase domain (SMART Accession No. S\_TKc). The bit score is 372.7 and the E-value is 3.8e-108. Fig. [6C] 4C depicts an alignment of amino acid residues 356 to 613 of SEQ ID NO:5 with a tyrosine kinase domain (SMART Accession No. TyrKc). The bit score is 50.0 and the E-value is 5.3e-15. All three alignments show an underlined sequence at 473 to 485, which is a pattern match to a serine/threonine protein kinase active site signature sequence (Prosite Accession No. PS00108).
